

Statistical Process Control - 2-day Course

What is it?

This 2-day training course is designed to give a comprehensive introduction into the subject of Statistical Process Control and will enable delegates to apply value-added statistical techniques to real-world situations.

There is some mathematical content, but there is emphasis on concepts and application, particularly in the use of Minitab statistical software.

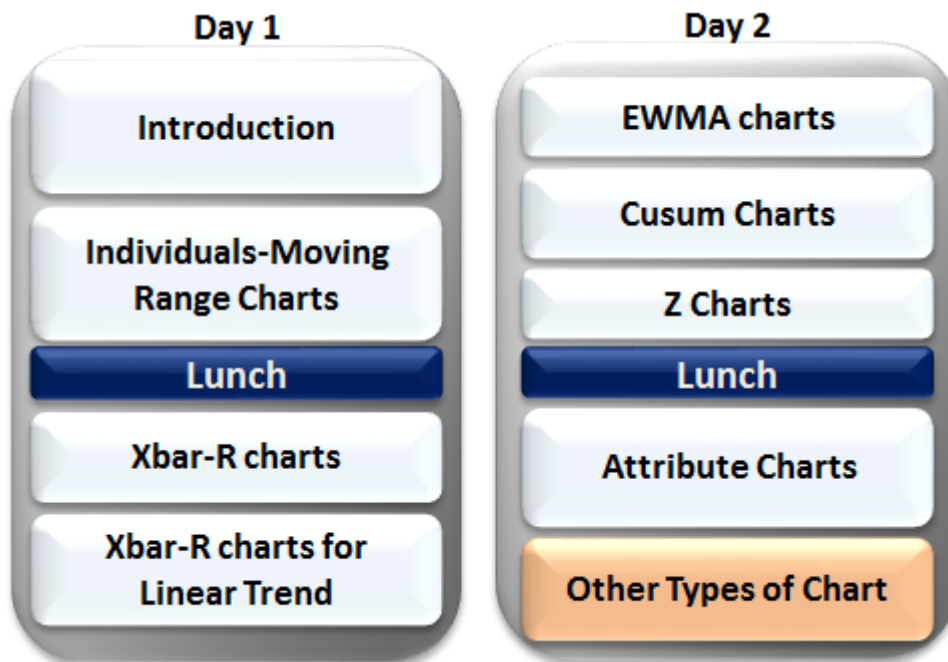

Who should attend?

It is suitable for those who are responsible for performing root cause analysis, process monitoring and demonstrating conformance to requirements.

Delegates will be required to attend the course with their own laptops, with Minitab installed (at least V16). A 1-month evaluation copy of Minitab can be downloaded prior to the course from the Minitab website.

How will they benefit?

Those organisations that fully embrace Six Sigma save not thousands of pounds and dollars but millions, while at the same time improving their quality and delivery performance not ten fold but a hundred fold. The Six Sigma Group has helped many organisations successfully implement Six Sigma, training Champions, Black and Green Belts and Design for Six Sigma Specialists.

You can book this course by calling us today on **01926 632888** or emailing us at info@sixsigmagroup.co.uk
